

WALL PEDESTAL MOUNTS EXPLAINED

A wall pedestal mount is a type of mount which is put up against a wall, with either left or right shoulder against the wall and head is facing away from the wall, into the room.

We have four standard available wall pedestal mount forms all differing in “head direction”. Head direction is determined by the direction the animal is looking. Do not be confused by the direction you look when standing in front of the animal.

1. Left Shoulder – Slight Right: Left shoulder against the wall with animal looking 45° away from wall, into the room,
2. Left shoulder – Right: Left shoulder against the wall with animal looking 90° away from wall, into the room,
3. Right Shoulder – Slight Left: Right shoulder against the wall with animal looking 45° away from wall, into the room,
4. Right Shoulder – Left: Right shoulder against the wall with animal looking 90° away from wall, into the room.
